- 2- Mirna Mohamed Hisham
- 3- Haidy Anwar

Under Supervision of:

- Prof. Dr. Hamida abou bakr
- Prof. Dr. Hadeyah AbdelHamid
- Dr. Nancy Ramez Bedwani

Project Summary:

The provision of high quality dental care for children with special needs present a challenge for the dental profession.

Special needs children are those with a chronic physical, developmental behavioral or emotional condition that substantially limits one or more major life activities, and who need dental or general health services beyond what is generally required.

Accordingly, this study was carried out to assess the oral health status & the treatment needs among a group of deaf & mute children in Alexandria city.

Oral cavity might well be thought of as the window to the body because oral manifestations accompany many systemic disorders; these oral manifestations must be properly recognized if the patient is to receive appropriate diagnosis & referral for treatment.

Project Idea:

Oral and dental diseases among a group of deaf and mute children with in Alexandria .

Project Aim:

Oral health status and educational program among a group of special needs children (deaf & mute) in Alexandria city .
